

# How to create your Okta account to access the Spatial Collaboration Portal and Spatial Hosting Portal

July 2024

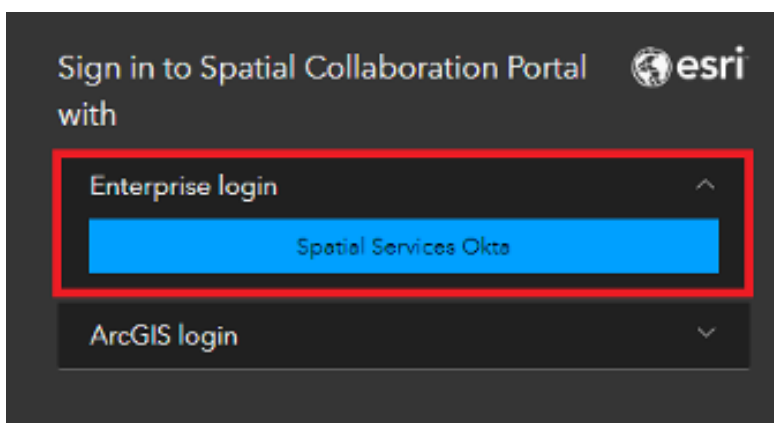

## Create Okta Account

This guide will walk you through the steps required to create a DCS (Department of Customer Service) Spatial Services Okta account. Follow the instructions below to get started and begin using all the features the Spatial Collaboration Portal has to offer.

1. First, **select** the 'Sign In' option in the top right-hand corner of the homepage.

2. From here a new window will open prompting you to login via Okta or ArcGIS. **Select** the 'Spatial Services Okta' login option.

- Once you have navigated to the sign in page, you will need to scroll to the bottom of the page and select the 'Sign Up' option.

After this you will be asked to set up security methods for account access and recovery.

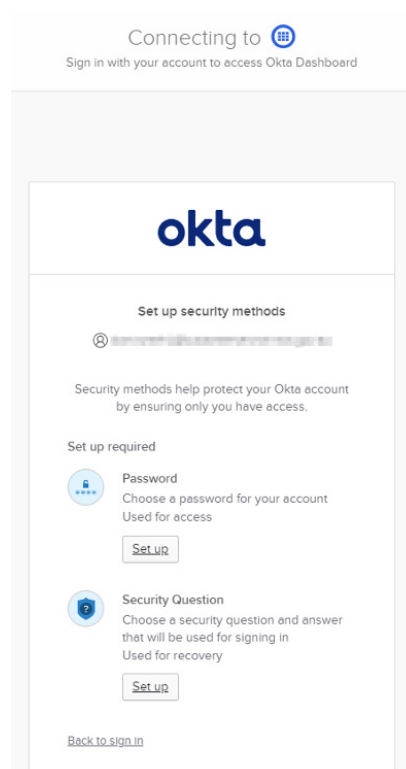

## Setting up Security Methods

5. First, click on the 'Set up' button for email verification. This will send a verification link and code to your email. Please note that the link expires five minutes after being sent.

6. Next, you will be asked to setup both a password and a security question. The security question will be important in the event you forget your password to verify that you are who you say you are and when sending you a password reset link.

You can setup either a pre-written question or write your own.

### Set up password

Password requirements:

- At least 8 characters
- A lowercase letter
- An uppercase letter
- A number
- No parts of your username
- Password can't be the same as your last 4 passwords

Enter password

Re-enter password

You will be asked to setup a multi-factor application (MFA); this guide will show you how to setup Okta Verify. To enable MFA you will require either the Okta Verify or Google Authenticator App on a smart device. This will allow a verification 'push notice' from the App each time you login to SCP.

7. Open Okta Verify on your phone, or if you do not already have it downloaded, download it from your iPhone or Android App Store. Click the + button in the top right-hand corner of the application and select 'Organisation' from the options.
8. If prompted to add the account from another device click 'Skip.'

9. This screen will ask if you have your QR code ready, which we should have open on the PC ready to go. Click 'Yes, *ready to scan*' and your phone camera will open allowing you to scan the QR code. If you are comfortable with Okta Verify showing notifications (such as sign in requests) on your phone, click 'Got it' on the following screen. Otherwise click 'Skip.'
10. If you have biometrics (face, fingerprint, or ocular scanning) setup on your phone, you can enable biometric confirmation which will let you access Okta Verify using your phones' biometric authentication method. If you are comfortable with this select '*Enable*,' or if not select '*Not now*.'

Congratulations, your account has now been added to Okta Verify on your phone!

A push notification will pop up asking you to press the number displayed on your screen whereas the code from Okta Verify will have you input a code from your app. You can select whichever of these options you are the most comfortable with.

Congratulations, the process of creating and setting up your Okta account is now complete!

You should see the applications available to you within the Okta console under My Apps, allowing you to click on a specific tile to access that application.
